Find information, videos, and activities about DNA, genes, chromosomes, the building blocks Source: Genetics Science Learning Center at the University of Utah . Description: An app that allows you to view three-dimensional renderings of. Genes are contained in chromosomes, which are mainly in the cell nucleus. A chromosome contains hundreds to thousands of genes. Every human cell contains 23 pairs of chromosomes, for a total of 46 chromosomes. A trait is any gene-determined characteristic and is often determined by more than one gene. This opens up new aspects of gene regulation that weren't open to Whereas that study only looked at a few chromosomes, the Science.

The human genetic material is packaged into 46 chromosomes. . 3School of Materials Science and Engineering, Tongji University, Shanghai. Loops form and disappear to allow genes to interact. with 2 meters of DNA wrapped around 46 chromosomes like a jumble of spaghetti. These three-dimensional (3D) studies employ what are known as 3C-based methods to determine the (3) Do chromosome conformation, and nuclear organization affect gene expression, or vice versa (or both)?
